

Contents

Part I : Climatology

1. **The Atmosphere : Origin; Composition and Structure** 1–10
Origin of the atmosphere; Composition of the atmosphere; Structure of the atmosphere; Layered structure of the atmosphere; Modern views regarding the structure of atmosphere.
2. **Insolation and Heat Budget** 11–22
Insolation; Distribution of insolation; Atmospheric depletion of solar radiation; Heat budget; Latitudinal heat balance.
3. **Temperature of the Atmosphere** 23–29
Heat and temperature; Processes of heat energy transfer; Heating and cooling of the atmosphere; Controls of temperature.
4. **Distribution of Temperature** 30–50
Horizontal distribution; Mean annual temperature distribution; Seasonal distribution; Annual temperature range; Daily cycle of air temperature; Vertical distribution of temperature; Temperature Inversions; Isanomalous Temperatures.
5. **Air Pressure and Winds** 51–71
Air pressure; Measurement of air pressure; Variations in air pressure and weather; Pressure gradient; Basic atmospheric pressure patterns; Vertical structure of cyclones and anticyclones; Horizontal distribution of pressure; Seasonal variations in the pressure pattern; Meridional profile of sea-level pressure; Distribution of pressure aloft; Winds; Factors affecting wind motion; Wind observation and measurement; Wind shift.
6. **General Circulation of the Atmosphere** 72–88
Broad categories of atmospheric motion; Thermal circulation on a rotating earth; Earth's surface wind systems; Departures from idealized circulation pattern; Latitudinal shifting of winds belts; Longitudinal variations in air flow patterns; Tricellular meridional circulation; Circulation pattern in vertical and horizontal planes; Climatic significance of meridional circulation; Jet stream; Index cycle of the jet stream; Jet stream and surface weather.
7. **The Monsoon** 89–103
Monsoon—its different meanings; Economic importance of the monsoon; Concepts of the origin of monsoon; Thermal concept; Flohn's concept; The Asian monsoon; East Asian monsoon; Monsoons of Southern Asia; Monsoons of south and east Asia compared; The Indian monsoon; Classical theory of Indian monsoon; Recent theories of the origin of Indian monsoon; Seasonal changes in India; Pseudo-monsoon areas of the world; Climatic significance of monsoons.
8. **Local Winds** 104–111
Land breeze and sea breeze; Mountain and valley breezes; Hot local winds; Cold local winds; Other local winds.

- 9. Humidity** **112–124**
Three states of water; Sources of atmospheric moisture : the hydrologic cycle; Humidity and temperature; Humidity measurements; Evaporation; Factors affecting rate of evaporation; Potential evapotranspiration; Distribution of evaporation; Condensation; Processes of cooling for producing condensation; Necessary conditions for condensation; Forms of condensation.
- 10. Fog and Clouds** **125–134**
Fog; Classification according to processes; A simplified classification; Classification according to visibility; Classification on the basis of appearance; Fog dissipation processes; Distribution of fog; Clouds; Classification of clouds.
- 11. Precipitation** **135–154**
Precipitation process; Ice-crystal theory of Bergeron; Collision-Coalescence theory; Forms of precipitation; Types of precipitation; Distribution of precipitation; Factors controlling distribution; Distribution of mean annual precipitation; Zonal distribution of mean annual precipitation; Seasonal variation of precipitation; Diurnal variation of precipitation; Precipitation variability; Intensity of precipitation; Artificial precipitation.
- 12. Atmospheric Equilibrium : Stability and Instability** **155–165**
The concept of equilibrium; Atmospheric equilibrium; Adiabatic process of temperature change; Adiabatic lapse rates; Atmospheric stability and lapse rate; Stability; lapse rates; and altitude; Atmospheric equilibrium in saturated air; Stability and daily weather; Changes in stability.
- 13. Air Masses** **166–184**
Definition and characteristics; Source regions; Air mass modification; Classification of air masses; Air masses and source regions; Air masses of North America; Winter air masses; Summer air masses; Air masses of Asia; Air masses of Europe; Winter air masses; Summer air masses.
- 14. Fronts : Frontogenesis and Frontolysis** **185–191**
General frontal characteristics; Frontogenesis and frontolysis; Classification of fronts; Principal zones of frontogenesis;
- 15. Atmospheric Disturbances : Cyclones and Anticyclones** **192–206**
Climatic significance of atmospheric disturbances; Cyclones; Non-frontal atmospheric disturbances in temperate zone; Extratropical cyclones (wave cyclones); Origin of extratropical cyclones; Polar front theory; Bjerknes' cyclone model and sequence of weather; Secondary cyclones and cyclone families; Anticyclones; Travelling anticyclones of middle latitudes; Types of anticyclones; Blocking highs.
- 16. Tropical Disturbances** **207–216**
Types of tropical disturbances; Origin of tropical cyclones (Hurricanes); Movement and tracks of hurricanes; Hurricane seasons; Regional distribution; Environmental importance.

- 17. Thunderstorms; Tornadoes and Waterspouts** **217–227**
Thunderstorms; Origin and structure; Stages of development; Factors favouring thunderstorm development; Thunderstorm electricity; Thunder : how it is produced; Precipitation in a thunderstorm; Hail in a thunderstorm; Classification of thunderstorms; Distribution of thunderstorms; Tornadoes; Waterspouts.
- 18. Classification of Climate** **228–243**
Basis of classification; Koppen's classification; Thornthwaite's classification; Thornthwaite's 1931 classification; Thornthwaite's 1948 classification; Trewartha's classification; Climatic groups based on temperature criteria; Climatic group based on precipitation criteria; Salient features of the classification.
- 19. Climatic Types and Their Distribution** **244–263**
Tropical rainforest climate; Savanna climate; Tropical monsoon climate; Sahara type climate; Low-latitude steppe climate; Middle-latitude steppes climate; Middle-latitude desert climate; Mediterranean climate; China type of climate; Temperate oceanic climate; Humid continental; hot summer climate; Humid continental mild summer climate; Taiga climate; Tundra climate; Ice-cap climate; Highland climates.
- 20. Climatic Changes** **264–273**
Climatic changes through geological time; Theories of climatic changes; Theories involving the displacement of continents; Theories involving change in the composition of atmosphere; Geographical theories; Theories involving a change in solar radiation;
- 21. Applied Climatology** **274–296**
Climate and Natural Vegetation; Climate and Agriculture; Climate and Animal Husbandry; Climate and Selection and Breeding of animals; Climate and Housing; Climate Conditioning and Design of the House; Air Pollution; Air Pollution and Health; Acid rain; Climate and disease; Climate and Human Comfort; Acclimatization; Climate and Urban Planning.
- 22. Global Warming** **297–302**
Industrial Sources of Greenhouse Gases; Carbon Dioxide and Global Warming; Methane and Global Warming; Chlorofluorocarbons (CFCs) and Global Warming; Other Greenhouse gases and Global Warming; The Potential Effects of Global Warming; Predicting Climate Change; Conclusion.

Part II : Oceanography

- 23. Oceanography : Definition and Scope** **303–310**
Boundaries and names of the oceans; Importance of the oceans; Definition and Scope; Major Branches of Oceanography; Oceanography and other related subjects.

- 24. A Historical Background of the Development of Oceanography** **311–324**
Classical Period – Contributions of the Greeks; The Dark Ages; The Golden Age of Discovery; Contributions of Spain and Portugal; The Search to Increase the Scientific Knowledge of the Oceans; Nineteenth Century- The Golden Age of Oceanography; The U.S. Exploring Expedition; Development of Oceanography in the Twentieth Century; Satellite Oceanography.
- 25. The Morphology of the Ocean Bottom** **325–339**
The Hypsographic or Hypsometric Curve; Origin of Continental Shelf; Continental Slope; Submarine Canyons; Theories of the Origin of Submarine Canyons; The Sub-aerial Erosion Hypothesis; Diastrophic Theory; Submarine Mudflow and Landslides Hypothesis; Submarine Density Currents; Turbidity Currents Theory; Submarine Spring Sapping; Tsunamis or Earthquake Waves; The Deep Sea Fans and the Continental Rise; The Deep Sea Plains; The Oceanic Deeps.
- 26. Bottom Relief of the Oceans** **340–353**
The Atlantic Ocean : Bottom Relief; Basins; Oceanic Deeps; Islands in the Atlantic Ocean; Marginal Seas; The Pacific Ocean : Bottom Relief; Ridges and basins; Oceanic Deeps; Island of the Pacific Ocean : Marginal Seas; The Indian Ocean : Shape and Size; Bottom Relief; Ridges and Basins; Oceanic Deeps; Islands; Marginal Seas; The Arctic Ocean : Bottom Relief; Ridges and Basins; Islands of the Arctic Ocean; Marginal Seas.
- 27. Temperature of the Oceans** **354–365**
Sources of Heat; Surface Temperature of the Ocean water; Factors affecting the horizontal distribution of surface temperature of the oceans; Ranges of Sea Surface Temperature; Diurnal Range of Temperature of the Ocean Water; Annual Range of Temperature; Annual Variations of Temperature in the Subsurface Layers of the Oceans; Vertical Distribution of Temperature in the Oceans; The Vertical Temperature Distribution in Adjacent Seas.
- 28. Salinity and Density of Ocean Water** **366–387**
Salinity : Definition; Salinity-its significance; Various Sources of Oceanic Salts; Factors Causing Variations in Salinity; Annual Variation in the Surface Salinity; Distribution of Salinity; Partially or Wholly Enclosed Seas; Inland Seas and Lakes; Vertical Distribution of salinity; Regional Distribution of Salinity; Atlantic Ocean; Partially Enclosed Seas; Pacific Ocean; Indian Ocean; Density; Factors Controlling the Density of Ocean Water; Other Minor Factors; Distribution of Density; Horizontal Distribution of Density; Vertical Distribution of Density.
- 29. Water Masses** **388–397**
Definition; The Practical Significance of the T.S. Curve; Types of Water Masses; Surface-Water Masses; Deeper-Water Masses.

30. Marine Deposits	Classification of Marine Sediments; Sources of Marine Deposits; Sediment Texture; Organic and Carbonic Deposits; Distribution of Pelagic Sediment; Pacific Ocean; Atlantic Ocean; Indian Ocean.	398–409
31. Coral Reef	Distribution of Coral Reefs; Conditions of Coral growth; Types of Coral Reefs; Hypotheses regarding the origin of atolls and barrier reef; Darwin's Subsidence Theory; The Non-subsidence Theory of Murray; Agassiz; and Semper; Daly's Glacial Control Theory; Application of Physiography to the Coral Reef Problem by Davis.	410–421
32. Oceanic Waves and Tides	Wave Characteristics; Motion of Water Particles in a Wave; Deep-water Waves; Shallow-water Waves (Long waves); Transitional Waves; Speed of Waves; Wind-generated Waves; Wave Transformation; Surf; Destructive Waves; Constructive Waves; Wave Refraction; Wave Diffraction; Wave Reflection; Breaking of the Waves : Breakers; Types of Breakers; Technical Terms Connected with Tides; Types of Tides; Tide-Producing Forces; Combined Effects of Sun and Moon on Tides; Declinational Tides; Effect of Distance-Apogean and Perigean Tides; Theory of Ocean Tides; Equilibrium Theory of Tides; Merits and Demerits of the Equilibrium Theory; The Dynamical Theory of Laplace; The Progressive Wave Theory; Stationary Wave Theory; Tidal Currents; Importance of Tidal Currents; Tidal Bore; Storm Surges; Tides in Bays and Gulfs; North Sea Tide; The Bay of Fundy; Tides in Partly Enclosed Seas; Effects of Tides.	422–449
33. General Characteristics and Origin of Ocean Currents	Ocean Currents and Climate; Surface Ocean Currents and Fishing Grounds; Types of Ocean Currents; The Theories of Ocean Currents; Causes and Character of Ocean Currents; Ekman Spiral; Geostrophic Currents; Westward Intensification; Density of Ocean Water; Coriolis Force; Gravitational Force; Atmospheric Pressure; Precipitation and Evaporation; Difference in Temperature; Melt Water; Modifying Factors.	450–459
34. Ocean Currents	Currents of the North Atlantic Ocean : Gulf Stream; The North Atlantic Drift; The Canaries Current; The Labrador Current; Sargasso Sea; Currents of the South Atlantic Ocean : Pacific Ocean : Enso; Indian Ocean : The Currents of the Antarctic Ocean : The Antarctic Circumpolar Current.	460–477
35. Man and Marine Resources	The Oceans and the Climate; Marine Energy Resource; Marine Food Resource; The Fishing Industry; Distribution of Marine Life; Life in the littoral zone; Life in the Pelagic Zone; Life in the Intermediate Depths; Life on the Ocean Bottom; Mariculture; Oceans-The Treasure House of Minerals; Marine Pollution; Oceans as Modifier of Greenhouse effect; The Indian Scenario.	478–487
	Multiple-Choice Type Questions	488–502

List of Maps and Diagrams

- Fig. 1.1.** The percentage of the total mass of the atmosphere below elevations upto 80 km.
- Fig. 1.2.** The layered structure of the atmosphere (Vertical scale logarithmic)
- Fig. 2.1.** The unequal distribution of insolation on the earth's surface.
- Fig. 2.2.** Latitudinal and seasonal variation in the amount of insolation received at the outer margin of the atmosphere.
- Fig. 2.3.** The angle of sun's rays determines the intensity of insolation on the earth's surface.
- Fig. 2.4.** The model of the terrestrial heat balance (After Houghton).
- Fig. 2.5.** Mean latitudinal distribution of the earth's radiation budget.
- Fig. 4.1.** Isotherms and temperature gradient.
- Fig. 4.2.** Distribution of mean annual temperature (at sea level).
- Fig. 4.3.** Seasonal migration of isotherms over land and water in middle latitude.
- Fig. 4.4.** Average sea level temperature (January).
- Fig. 4.5.** Average sea level temperature (July).
- Fig. 4.6.** Temperature lapse rates : (steep; normal and low).
- Fig. 4.7.** Vertical distribution of temperature in the atmosphere.
- Fig. 4.8.** Low-level temperature inversion.
- Fig. 4.9.** Temperature inversion in a valley with associated air drainage and thermal belt.
- Fig. 4.10.** Upper-air inversion.
- Fig. 4.11.** Height of the base of trade wind inversion over the tropical Atlantic Ocean.
- Fig. 4.12.** Isanomalies of temperature (January).
- Fig. 4.13.** Isanomalies of temperature (July).
- Fig. 5.1.** Pressure variation and winds.
- Fig. 5.2.** Pressure gradient-steep and low.
- Fig. 5.3.** (a) Cyclonic circulation in northern hemisphere.
(b) Cyclonic circulation in southern hemisphere.
- Fig. 5.4.** Trough of low pressure and wedge of high pressure.
- Fig. 5.5.** (a) Anticyclonic circulation in northern hemisphere.
(b) Anticyclonic circulation in southern hemisphere.
- Fig. 5.6.** (a) Cold-core cyclone (c) Cold-core anticyclone
(b) Warm-core cyclone (d) Warm-core anticyclone
- Fig. 5.7.** Idealized zonal arrangement of pressure belts on a rotating earth.
- Fig. 5.8.** Annual average sea-level pressure in millibars.
- Fig. 5.9.** Sea-level pressure in millibars (January).
- Fig. 5.10.** Sea-level pressure in millibars (July).
- Fig. 5.11.** Meridional profile of sea-level pressure.
- Fig. 5.12.** Geostrophic wind.
- Fig. 5.13.** (a) Gradient wind flow around a high pressure centre. (northern hemisphere).
(b) Gradient wind flow around a low pressure centre (northern hemisphere).
- Fig. 5.14.** Effect of friction on the balance of forces in geostrophic flow.
- Fig. 5.15.** Backing and veering of wind

- Fig. 6.1.** Idealized global pattern of surface winds.
- Fig. 6.2.** Mean surface flow in the tropics and middle latitudes–July.
- Fig. 6.3.** Mean surface flow in the tropics and middle latitudes–January.
- Fig. 6.4.** Tricellular meridional circulation model for the northern hemisphere.
- Fig. 6.5.** Areas of strong divergence and convergence of the mean surface wind (January).
- Fig. 6.6.** Areas of strong divergence and convergence of the mean surface wind (July).
- Fig. 6.7.** Jet stream and its index cycle.
- Fig. 7.1.** Monsoon region (After Ramage).
- Fig. 7.2.** Winter monsoon.
- Fig. 7.3.** Summer monsoon.
- Fig. 7.4.** Meridional profile of Indian summer monsoon.
- Fig. 8.1.** (a) Sea breeze. (b) Land breeze.
- Fig. 8.2.** (a) Valley breeze. (b) Mountain breeze.
- Fig. 8.3.** Foehn or Chinook
- Fig. 8.4.** Drainage winds.
- Fig. 9.1.** Physical Changes of state of water.
- Fig. 9.2.** Hydrologic cycle.
- Fig. 9.3.** Meridional moisture exchange.
- Fig. 9.4.** Water vapour capacity of air at different temperatures.
- Fig. 9.5.** Zonal distribution of specific humidity.
- Fig. 9.6.** Relative humidity varies with changing temperature.
- Fig. 9.7.** (a) Zonal distribution of relative humidity.
(b) World distribution of relative humidity.
- Fig. 10.1.** World distribution of days with fog
- Fig. 10.2.** An integrated picture showing various cloud types.
- Fig. 10.3.** (a) Cirrus cloud; (b) Fair weather cumulus cloud; (c) Altocumulus; (d) Cumulonimbus cloud.
- Fig. 11.1.** Bergeron process of precipitation.
- Fig. 11.2.** Convectonal precipitation.
- Fig. 11.3.** Orographic precipitation.
- Fig. 11.4.** Frontal precipitation
- Fig. 11.5.** World distribution of precipitation – June to August.
- Fig. 11.6.** World distribution of precipitation - December to February.
- Fig. 11.7.** Zonal distribution of the mean annual precipitation.
- Fig. 11.8.** Distribution of annual precipitation over an imaginary continent.
- Fig. 11.9.** Seasonal concentration of precipitation over an imaginary continent.
- Fig. 11.10.** Variability of precipitation
- Fig. 12.1.** Adiabatic lapse rates at different temperatures.
- Fig. 12.2.** Stability and instability of the atmosphere.
- Fig. 12.3.** Conditional instability.
- Fig. 12.4.** Convective instability.
- Fig. 12.5.** Atmospheric stability; altitude and lapse rates.

- Fig. 13.1.** Principal air masses and their source regions.
- Fig. 13.2.** Principal air masses and fronts – July.
- Fig. 13.3.** Principal air masses and fronts – January.
- Fig. 14.1.** Frontal symbols used on weather maps.
- Fig. 14.2.** Vertical cross-section of a cold front.
- Fig. 14.3.** Vertical cross-section of a warm front.
- Fig. 14.4.** Vertical cross-section of a cold front type occlusion.
- Fig. 14.5.** Vertical cross-section of a warm front type occlusion.
- Fig. 15.1.** General lay-out of cold and warm fronts in an extratropical cyclone as depicted on a surface weather chart.
- Fig. 15.2.** Principal tracks of extratropical cyclones.
- Fig. 15.3.** Abercromby's model of an extratropical cyclone showing weather conditions in different sectors.
- Fig. 15.4.** Stages in the life cycle of an extratropical cyclone : (a) Initial stage (b) Incipient stage (c) Mature stage (d) Occlusion.
- Fig. 15.5.** Cyclone model.
- Fig. 16.1.** Easterly wave
- Fig. 16.2.** Model of a tropical cyclone.
- Fig. 16.3.** Arrangement of convective precipitation in lands.
- Fig. 16.4.** Principal tracks and areas of tropical cyclones.
- Fig. 17.1.** Three stages in the development of a convective thunderstorm :
(a) Cumulus stage (b) Mature stage; (c) Dissipating stage.
- Fig. 17.2.** World distribution of the annual average number of thunderstorm-days.
- Fig. 17.3.** Vertical cross-section of a typical tornado.
- Fig. 19.1.** Climatic types.
- Fig. 22.1.** Origin of excessive carbon dioxide. Countries and regions of origin (a) for excessive CO₂ in 1994 and (b) forecast for 2025.
- Fig. 22.2.** Global temperature trends.
- Fig. 24.1.** (A) Prince Henry of Portugal.
(B) Model of sixteenth century ship.
- Fig. 24.2.** Ferdinand Magellan-Portuguese explorer. His expedition was first to circumnavigate the world.
- Fig. 24.3.** Captain James Cook. He twice circled the globe. Penetrated into the Antarctic. Charted coastlines from Newfoundland to New Zealand.
- Fig. 24.4.** Lieutenant Charles Wilkes-Commander of the U.S.A.'s naval expedition aboard the flagship Vincennes.
- Fig. 24.5.** Mathew Fontaine Maury-Compiler of winds and currents. Wrote 'The Physical Geography of the Sea.
- Fig. 24.6.** Fridtjof Nansen. Norwegian Oceanographer and polar-explorer.
- Fig. 24.7.** The joint U.S.-French Topex/Poseidon satellite orbits 1336 km. above earth covering 95% of the ice-free ocean every ten years.
- Fig. 25.1.** Hypsographic Curve.

- Fig. 25.2.** Ridges and trenches : Oceans of the world.
- Fig. 26.1.** Bottom Relief of the Atlantic Ocean.
- Fig. 26.2.** Continental Shelf : West European Coast, N.E. Coast of U.S.A.
- Fig. 26.3.** Atlantic Ocean : Ridges and Trenches.
- Fig. 26.4.** Bottom Relief of the Pacific Ocean.
- Fig. 26.5.** Pacific Ocean : Ridges and Trenches.
- Fig. 26.6.** Bottom Relief of the Indian Ocean.
- Fig. 26.7.** Indian Ocean : Ridges.
- Fig. 27.1.** Annual average surface temperature : January.
- Fig. 27.2.** Annual average surface temperature : July.
- Fig. 27.3.** Latitudinal variation in the ocean surface temperature.
- Fig. 28.1.** Surface Salinity of the Oceans.
- Fig. 28.2.** Mean Meridional density distribution.
- Fig. 28.3.** Salinity, Freezing Point and Temperature of Maximum Density.
- Fig. 29.1.** Surface Water Masses in the Ocean.
- Fig. 29.2.** Temperature-salinity relations of water masses in the North and South Pacific Ocean.
- Fig. 29.3.** Temperature-salinity relations of water masses in the Atlantic and Indian Ocean.
- Fig. 30.1.** General Distribution of marine deposits on the ocean floor.
- Fig. 30.2.** Marine Deposits on the bottom of the Pacific Ocean.
- Fig. 30.3.** Marine Deposits on the bottom of the Atlantic Ocean.
- Fig. 30.4.** The Distribution of Marine Deposits in the Indian Ocean.
- Fig. 31.1.** Fringing Reef.
- Fig. 31.2.** The Great Barrier Reef.
- Fig. 31.3.** Barrier Reef.
- Fig. 31.4.** Barrier Reef and its passages.
- Fig. 31.5.** Atoll.
- Fig. 31.6.** An idealized cross-section of a Atoll.
- Fig. 31.7.** Coral Reef formation : Darwin and Dana.
- Fig. 31.8.** The Four Stages depicting the gradual change of a fringing reef attached to a volcanic island into an atoll.
- Fig. 31.9.** Different stages of the coral reef development on a subsiding island; Subsidence Theory.
- Fig. 31.10.** Non-subsidence theory of Coral Reef formation : Murray.
- Fig. 31.11.** Glacial Control Theory : Daly.
- Fig. 31.12.** Davis : Rising Sea Level and the change of a fringing reef attached to a stable island into a barrier reef and atoll.
- Fig. 31.13.** Subsidence : Different stages of the development of a barrier reef.
- Fig. 32.1.** Types of waves.
- Fig. 32.2.** Wave-length, Crest and Wave Height.
- Fig. 32.3.** Common centre of gravity of the revolution of the earth and moon.
- Fig. 32.4.** The Generating Force.
- Fig. 32.5.** Direct and Indirect tides.

- Fig. 32.6.** Diurnal change in the time of high tide.
 - Fig. 32.7.** Spring Tide.
 - Fig. 32.8.** Neap Tide.
 - Fig. 32.9.** Moon in Apogee and Perigee.
 - Fig. 32.10.** Distribution of Tidal Forces.
 - Fig. 32.11.** Co-tidal Lines in the Atlantic Ocean.
 - Fig. 32.12.** Harris : Unimodal Oscillation.
 - Fig. 32.13.** Harris : Bimodal Oscillation.
 - Fig. 32.14.** Amphidromic point in the North Atlantic Ocean.
 - Fig. 32.15.** Tidal Bore.
 - Fig. 33.1.** Ekman Spiral and Net Water Movement.
 - Fig. 34.1.** Currents of the Atlantic Ocean.
 - Fig. 34.2.** The Kuroshio System.
 - Fig. 34.3.** Ocean Currents : Pacific Ocean.
 - Fig. 34.4.** Currents of the Indian Ocean (Winter Monsoon).
 - Fig. 34.5.** Currents of the Indian Ocean (Summer Monsoon).
