

FUNDAMENTALS OF

PRACTICAL GEOGRAPHY

Dr. L. R. Singh

PRACTICAL GEOGRAPHY

**SHARDA PUSTAK BHAWAN
ALLAHABAD**

Contents

	Preface	
1.	MAPS	1-12
	Meaning and Purpose	
	Types of Maps : (a) General Maps, (b) Thematic Maps, (c) Special Maps : (i) Environmental Maps, (ii) Weather Maps, (iii) Navigational Charts, (iv) Aeronautical Maps, (v) Military Maps, (vi) Mental Maps and (vii) Cartograms.	
	Importance and Uses of Maps	
	History of Maps : (a) Early Beginnings, (b) Medieval Period (c) Modern Maps	
	Indian Contribution to Cartography	
2.	SCALES	13-31
	Definition	
	Methods of Representing Scales	
	Problems of Scales or Conversion of Scales	
	Plain Scales, Diagonal Scales, Vernier Scales, Comparative Scales, Time Scales, Scales of Square Roots, Scales of Cube Roots, Scales of Slopes	
	Enlargement and Reduction of Maps	
	Combination of Maps	
	Computation of Area	
3.	MAP PROJECTIONS	32-77
	Section A : General	
	Meaning and Purpose; Classification of Projections and their General Characteristics	
	Section B : Conical Projections	
	Introduction, Constant of Cone, Simple Conical Projection with One Standard Parallel	
	Conical Projection with Two Standard Parallels, Boune's Projection or Conical Equal Area Projection, Polyconic Projection.	
	Sinusoidal or Sanson – Flamstead Projection	
	International Map Projection.	
	Section C : Cylindrical Projections	
	Natural Cylindrical Projection	

Simple Cylindrical Projection or the Cylindrical Equidistant Projection, Cylindrical Equal area Projection Mercator's Projection or Cylindrical Orthomorphic Projection : Great Circle, Loxodrome and Mercator's Projection.

Section D : Zenithal Projections

Classification of Zenithal Projections : Polar Gnomonic Projection, Polar Stereographic or Zenithal Orthomorphic Projection, Polar Orthographic Projection, Polar Zenithal Equidistant Projection, Polar Zenithal Equal-area Projection.

Section E : Conventional Map Projections : Globular Projection, Gall's Projection, Mollweide Projection.

4. SURVEYING

78-109

Section A : General

Definition and Purpose, Methods of Surveying Triangulation and Traversing.

Section B : Chain Surveying

Equipment, Surveying Procedure Fieldwork; Preparation of the Map or Plan; Problems of Chain Surveying.

Section C : Prismatic Compass Surveying

Prismatic Compass, Measurement of Bearings; Method of Prismatic Compass Survey; Record of the Survey Closing Error and its correction; General Disagreement of Bearings

Section D : Plane Table Surveying

Equipment, Procedure for Plane Table Surveying.

Resection : (1) Geometrical or Graphical Method, (2) Mechanical or Tracing Paper Method, (3) Trial and Error Method or The Three-Point Problem; Two-Point Problem of Resection.

Section E : Theodolite

Components of Transit Theodolite

Adjustments of the Transit Theodolite

Surveying Procedure; Levelling; Elimination of Parallax; Measuring Horizontal and Vertical Angles; Calculation of Height.

Section F : Sextant

Components of Sextant

Surveying Procedure

Section G : Telescopic Alidade
Components : The Stadia Method
Section H : Indian Clinometer
Components : Surveying Procedure
Section I : Other Surveying Instruments
Spirit Level; Watt's Highway Level
Components : Survey Procedure, Types of Levelling
Differential Levelling and Profile Levelling
Abney Level; Aneroid Barometer; Ceylon Ghat Tracer
Section J : Practical Contouring

5. REMOTE SENSING AND GIS 110-130

Introduction
Meaning of Remote Sensing
Processes and Elements of Remote Sensing
1. Data Acquisition, 2. Data Analysis
Electromagnetic Spectrum
Characteristics and Utility Potential of Remote Sensing
Satellites.
Interpretation of Air Photographs
Types of Air Photographs
Determination of Scales of Air Photographs
Steps in Photo Interpretation
An Interpretation Chart for Air Photographs
Photo Image and its elements
Geographical Information System (GIS) :
Definition of GIS; Key Attributes of GIS;
Components of GIS; Stages of GIS Data Modelling
Sources of Errors in GIS
Integration of Remote Sensing and GIS

6. STATISTICAL METHODS AND TECHNIQUES 131-156

Sampling Techniques : (1) Random Sampling;
(2) Stratified Sampling; (3) Cluster Sampling;
(4) Systematic Sampling
Statistical Treatment of Data; Frequency Distribution;
Histogram
Measures of Central Tendency :
Mean, Median, Mode
Measures of Dispersion or Variation :
1. Absolute Measures of Dispersion : (a) Range,
(b) Mean Deviation; (c) Standard Deviation.

2. Relative Measures of Dispersion : (a) Coefficient of Variation; (b) Pluviometric Coefficient; (c) Skewness; (d) Kurtosis

Time Series : Moving Averages; Variability Index; Lorenze Curve; Correlation and Regression Analysis; Probability; Interpolation : (1) Graphical Method; (2) Mathematical Tests of Statistical Significance; Chi-Square Distribution; T-Test

7. REPRESENTATION OF STATISTICAL DATA 157-178

Introduction

1. Simple Bar or Columnar Graph; 2. Compound Bar or Sub-divided Bar Graph 3. Pyramid Diagram; 4. Divided Rectangle

Pie or Wheel Diagram; Ring Diagram;

Three Dimensional Diagrams :

1. Spheres; 2. Block Pile System; 3. Pictorial Diagrams
Graphs or Diagrams of Time Series Dats – Simple Line Graphs; Polygraphs; Band Graphs; Ergographs

Distribution Maps : Isopleth Maps, Choropleth Maps; Determination of Class Intervals : (1) Equal Step or Constant Series Class limits; (2) Systematic Unequal Stepped Series Class Limits; (3) Irregular Stepped Class Limits.

Dot Maps : (1) Uniform Dot Method; (2) Multiple Dot Method; (3) Alternative Dot Methods;

(i) Stilgenbauer's Method; (ii) Sten de Geer's Method; (iii) Grano's Method

Cartograms : 1. Value area or Rectangular Cartograms; 2. Centrograms; 3. Traffic flow Cartograms; 4. Triangular Coordinate Graphs; 5. Isochronic Cartograms.

8. REPRESENTATION OF WEATHER AND CLIMATE DATA 179-203

Section A : Elements of Weather and Climate:

1. Temperature; 2. Pressure; Isobaric Systems : Cyclone or Low or Depression; Trough or V-shaped Depression; Secondary Depression; Anti-cyclone or High, Col, Ridge
3. Wind Velocity and Direction; Beaufort's Scale

4. Humidity : Relative Humidity and Specific Humidity

5. Precipitation : Rainfall, Snowfall, Sleet

6. Visibility : Visibility Code

7. Clouds : Types and Associated Conditions

8. Fogs : Radiation Fog; Advection Fog
Other Elements : Mist, Haze, Shower, Hail, Frost, Squall, Dust Storms or Sand Storms, Corona, Halo
 Use of Meteorological Observations : Meteorological Symbols
 Weather Forecasting : (1) Path Method; (2) Geostrophic Wind System Method; (3) Isallobaric Gradient Method
 Local Weather Forecasting
 Section B : The Weather Maps
 The Indian Weather Maps depicts : (1) Pressure; (2) Wind; (3) Sky Condition; (4) Precipitation; (5) Sea Conditions;
 Inset Maps : Temperature and Pressure Departures from Normal
 General Seasonal Conditions of India : Cold Weather Season; Hot Weather Season; Rainy Season; Season of Retreating Monsoon
 Analysing A Weather Map of India : An Example
 Section C : Climatic Maps and Diagrams
 Line Graphs, Bar Graphs or Columnar Diagrams; Combined Line and Bar Graph, Climograph, Hythergraph, Water Balance or Water Budget Graphs

9. REPRESENTATION OF RELIEF AND STRUCTURE

204-240

Section A : Methods of Representation of Relief
 1. Hachures; 2. Contours; 3. Form Lines; 4. Spot Heights; 5. Hill Shading; 6. Layer-Colouring or Hypsometric Tints; 7. Physiographic or Morphologic Method; 8. Combined System of Showing Relief
 Section B : Representation of Relief Features by Contours : Hill, Ridge, Mountain, Plateau, Knoll, Spur (Salient), Escarpment or Scarp, Cliff, Over-hanging Cliff, Volcanic Valley, Gorge, Waterfall, Rapid, Flood Plains, River Terrace, Incised Meanders, Ox-bow Lakes, Karst Topography, Glaciated Topography, U-shaped Valley, Hanging Valley, Cirque or Corrie, Moraines, Fiord Coast, Ria Coast, Sand Dunes.
 Section C : Slopes and Gradients
 Types of Slopes : 1. Uniform, 2. Convex, 3. Concave and 4. Undulating

Methods of Expression of Slope :

(a) By Degrees, (b) By Gradient, (c) By Percentage,
(d) By Mils

Conversion of Gradient with Degrees of Slope and Vice-
Versa

Table of Standard Slopes

Finding Slope from Contours

Land-Slope Maps :

1. Wentworth's Method
2. Smith's Method of Relative Relief
3. Raisz and Henry Method of Slope Categories
4. Robinson's Dot Method of Slope Analysis

Profiles of Relief Features

Drawing of A Profile

Types of Profiles : 1. Serial Profiles, 2. Superimposed
Profiles, 3. Composite Profiles, 4. Projected Profiles

Intervisibility : 1. Graphical Method, 2. Gradient Method

Dead Ground

Road Section, Drawing Routes on Contour Maps

Section D : Block Diagrams

Construction of Block Diagrams

1. One-point Perspective Block Diagram
2. Two-point Perspective Block Diagram

Transfer of Geological Structure on the Block

Method of Transferring Structure

Representation of Relief on a Block Diagram

Mature Streams, High Relief Features, Ridge,

Karst Topography, Glaciated Topography

Transformation of a Contour Map into a Block Diagrams

1. The Multiple Section Method, 2. The Layer Method

Section E : Interpretation of Geological Maps

Elements of Geological Map

1. Conventional Symbols and Tints; 2. Scale; 3. Beds and Bedding Planes; 4. Dip; 5. Strike Lines; 6. Outcrops; 7. Unconformity; 8. Overlap; 9. Inliers and Outliers; 10. Faults; 11. Folds (Overfolds, Isoclinal Folds, Recumbent Folds, Nappes)

Igneous Rocks : 1. Extrusive Igneous Rocks, 2. Intrusive
Igneous Rocks

Interpretation of Geological Maps

Geological History

Correlation of Structure with Relief or Topography

**10. STUDY AND INTERPRETATION OF TOPO-
GRAPHICAL MAPS**

241-267

Introduction; Importance of Topographical Maps,
International Systems of Topographical Maps

Topographical Mapping in India :

1. India and Adjacent Countries Series;

2. Carte Internationale Du Monde Series;

3. Topographical Maps of India :

(a) Million Maps; (b) Degree or Quarter Inch Maps
Series; (c) Half-Degree or Half-Inch; (d) Quarter Degree
or One-Inch Map Series; (e) Town Guide Maps

Hints for the Study of Toposheets.

Marginal or Preliminary Information

Relief, Drainage (Drainage Patterns), Vegetation,
Irrigation, Occupations, Means of Communications;
Human Settlements

Conventional Symbols for Topographical Maps of India
Description

Study of Some Selected Toposheets

1. Mirzapur and Varanasi Districts : U.P. : Toposheet
No. 63 K/12

2. Champaran and Gorakhpur Districts (India) and
Birganj (Nepal) : Toposheet No. 63 M/15

3. Baghelkhand Agency and Bilaspur District (M.P.) :
Toposheet No. 64 F/13

11. IDENTIFICATION OF ROCKS AND MINERALS 268-280

Introductory; Kinds of Minerals : (A) Rock Forming
Minerals; (B) Ore Forming Minerals

Physical Properties :

1. Crystal Systems; 2. Colour; 3. Streak; 4. Hardness; 5.
Cleavage; 6. Lustre; 7. Specific Gravity; 8. Diaphamy; 9.

Other Properties

Thirty Common Minerals :

Identification Table

Classification of Rocks

Average Mineral Composition of Some Common Rocks

Igneous Rocks : Granites, Syenites, Diorites, Gabro
Dolomite, Basalt, Pegmatite, Perdiiorite, Ryholite, Pumic

Sedimentary Rocks : Sandstones, Conglomerates, Lime Stone, Chalk, Loess, Shale, Breccia,
Metamorphic Rocks : Marble, Slate, Quartzite, Gneiss, Schist, Amphibolite, Phyllite

12. FIELD TECHNIQUES AND RESEARCH

METHODS

281-293

Introductory, Field Methods, Preparation for Organising a Field Trip

Field Research Design :

1. Statement of the Problem; 2. Formulation of Hypothesis; 3. Identification of Data Requirement; 4. Data Collection; 5. Data Processing; 6. Findings and Presentation

Socio-Economic Data at Village Level

APPENDICES

294-317

- I. Dimensions, Constants and Formulas.
- II. Proportion of Areas Under the Normal Probability Curve.
- III. Conversion of Correlation Coefficient and Fisher's Z Coefficient.
- IV. Critical Values of Chi-square
- V. Critical Values of F-Ratio
- VI. Trigonometrical Values
- VII. Square Roots
- VIII. Cube Roots
- IX. Reciprocals of Numbers from 1 to 10
- X. Random Sampling Numbers
- XI. Pseudo-random Numbers
- XII. Logarithms
- XIII. Anti-Logarithms

BIBLIOGRAPHY

319-320
