

CONCEPTS AND TECHNIQUES OF GEOINFORMATICS

Dr. Masood A. Siddiqui

SHARDA PUSTAK BHAWAN
ALLAHABAD

CONTENTS

- 1. Understanding Map** **1 – 42**

The Shape of the Earth, Geoid, Datum, Reference Ellipsoid, Scale, Co-ordinate Systems, Geographical Co-ordinates/Spherical Co-ordinates, Rectangular coordinates/Cartesian Co-ordinates, Non-Coordinate systems, Co-ordinate transformation, (RMS) Errors of Fit, Higher Order Transformations (Warps), Map Projection, Classification on the basis of plane of projection, First order, Planar (Azimuthal), Conical, Cylindrical, Second order, Tangent, Secant, Poly superficial, Third order, Normal, Transverse, Oblique, Method of projection, Perspective projections, Non-perspective, Properties of the map projection, Universal Transverse Mercators Projection, The Lambert Conformal Conic Projection, Polyconic Projection, Projection Transformations, Topographical maps, New Map Policy.
- 2. Aerial Photography and Photogrammetry** **43 – 64**

Aerial Photographs, Numbering Information, Aerial Camera, Components of Aerial Cameras, Types of Aerial Cameras, Metric Cameras for Aerial Mapping, Normal Photo Camera (Simple Camera), Photographic Lenses, Types of Films, Geometry of Aerial Photographs, Parallel Projection, Orthogonal Projection, Central Projection (Perspective Projection), Types of Aerial Photographs, Multiple Lens Photography, Convergent Photography, Panoramic, Photo overlap, Stereovision, Pocket Stereoscope, Mirror Stereoscope, Elements of Photo Interpretation, Aerial Photography in India, Photogrammetry, Scale, Parallax.
- 3. Principles of Remote Sensing** **65 – 122**

Introduction, Principles of Remote Sensing, Electromagnetic Radiation (EMR), Electromagnetic Spectrum (EMS), Characteristics of waves in the electromagnetic spectrum, Energy Source, Interaction of EMR with the Atmosphere, Atmospheric Scattering, Selective Scattering, Non-selective Scattering : Absorption, Water vapour, Interaction of EMR with the earth surface, Image Resolution, Spectral Signatures, Vegetation, Water, Soil, Snow and Clouds, Concrete and metallic, Iron content, Organic matter, Satellite data formats and standards, Band Interleaved By Pixel Format (BIP), Band Interleaved By Line Format (BIL), Band Sequential Format (BSQ), Run Length Encoding (RLE), Data Exchange Standards, Platforms and Sensors, PLATFORMS, Satellite orbital characteristics, Geostationary satellite, Sunynchronous Satellite, LAND-SAT Series, Image Characteristics, SPOT Series, Indian Remote Sensing Satellite (IRS) Series, IRS-P3 and IRS-P4, RESOURCESAT-1, Others, JERS-1 (Japanese Earth Resources Satellite), ADEOS (Advanced Earth Observing Satellite), AVNIR (Advanced Visible Near Infrared Radiometer), OCTS (Ocean

Color and Temperature Scanner), MOS (Marine Observation Satellite MOS-1 / MOS-1b), IKONOS, GOES (Geostationary Operational Environmental Satellites), Meteosat, Sensors, Sensor Parameters, Optical Sensors, Microwave Remote Sensing, Layover, Foreshortening, Radar Shadow, Parallax and Stereo Capability, Spaceborne SAR, Interpretation, Thermal Remote Sensing.

4. Digital Image Processing **123 – 153**

Image Interpretation, Digital Image Processing, Image Rectification/ Restoration, Spatial Interpolation, Linear Transformations/ Affine Transformation/ First Order Transformation, Polynomial transformation, Intensity Interpolation, Geometric Corrections, Systematic Errors, Periodic Line Dropout, Destriping, Atmospheric Correction, Earth Rotation, Scan Skew, Mirror scans non linearity, Earth Surface Curvature, Nonsystematic Distortions, Image Enhancement, Contrast Stretching, Linear Contrast Stretching, Non linear Contrast Stretching, Histogram Equalization, Gaussian Stretching, Density Slicing, Band Rationing, Vegetation Indices, Simple Ratio or Ratio Vegetation Index (SR or RVI), Normalized Difference Vegetation Index (NDVI), Perpendicular Vegetation Index (PVI), Transformed Vegetation Index (TVI), Leaf Area Index (LAI), Soil Adjusted Vegetation Index (SAVI), Other Vegetation Indices, Spatial Filters, High frequency Filters, Linear Edge Enhancement/ Laplacian Filter, Non-Linear Filters, Roberts Filter (Non-Linear), Low Frequency Filters, Mean Filter, Median Filter, Mode Filter, Image Classification, Supervised Classification, Gaussian Maximum Likelihood Algorithm (MXL), Minimum – Distance to Mean Classifier, Box or Parallelepiped Classifier, Accuracy Assessment, Producer's Accuracy, User's Accuracy, Kappa Coefficient, Unsupervised Classification, Class Assignment, Principal Component Analysis (PCA).

5. Global Positioning System **154 – 168**

Introduction, NAVSTAR, GPS Basics, Space Segment, GPS Signals, Control Segment, The User Segment, Satellite Ranging, Absolute Positioning, Differential Positioning, Errors in GPS data, Noise, Intentional Errors, Other sources of errors, GLONASS, GALILEO, COMPASS, WAAS, GNSS (Global Navigation Satellite System), GPS in India, GAGAN, GPS Traversing, Static Surveying, Stop-And-Go Kinematic Surveying, GPS Applications.

6. Geographic Information System **169 – 197**

Introduction, Definitions of GIS, CAD versus GIS, Cartography versus GIS, History of GIS, GIS, Applications in India, Components of GIS, Technology Component, Hardware, Types of Computers, Software, Operating system, Some Common Operating Systems, Data Component, The People Component, Data Formats for GIS, Proprietary file formats, Raster formats, Data Standards, Metadata, Metadata Standards.

- 7. Basic Data Models** **198 – 226**
- The Real World, Spatial Data, Attribute Data, Raster Data Model, Data Compaction Techniques, Grid Model, IMGRID Model, Map Analysis Package (MAP), Raster Applications, Vector Data Model, Spaghetti Model, Topology Model, Geometric and Topologic Characteristics, Why Topology Matters, Whole Polygon Structure, DIME (Dual Independent Map Encoding), TIGER (Topologically Integrated Geographic Encoding and Referencing), DLG Structure (Digital Line Graph), Topological Structure, Connectivity (Arc-node topology), Area definition (Polygon- arc topology), Contiguity (Left- right topology), Errors in GIS, Advantage of vector data, Raster versus Vector, Raster, Vector.
- 8. Data Base Management System and Data Input** **227 – 238**
- Introduction, Types of DBMS Structure, Hierarchical Database Systems, Network Database Systems, Relational Database Systems, Structured Query Language (SQL), Object-Oriented Data Model, Data Input, Keyboard Entry, Scanning, Digitization Using Digitizing Table.
- 9. Models and Modelling in Gis** **239 – 257**
- Introduction, Models in GIS, Methodological Models / Conceptual Models, Mathematical Models/ Empirical Models, Binary Models, Index/ Weighting Models, Regression Models, Process Models, Universal Soil Loss Equation (USLE), AGNPS (Agricultural Non Point Source), The SWAT (Soil and Water Assessment Tool), Gravity Models, Artificial Neural Network (ANN), Shannon's Entropy, Cellular Automata, Network Model, Drastic Model.
- 10. Spatial Analysis and Query in Gis** **258 – 273**
- Introduction, Boolean Logic, Buffer Analysis, Proximity Analysis, Overlay Analysis, Vector overlay operation, Topological overlay, Raster Overlay, Reclassification, Query in GIS.
- 11. Digital Terrain Model** **274 – 286**
- Introduction, Triangulated Irregular Network (TIN) Model, Standard Delaunay Triangulation, Thiessen polygons, Construction of Thiessen Polygons, TINs from contours, Storing TINs, TIN and Arc View, INTERPOLATION, Inverse Distance Weighting (IDW), Spline, Kriging, Variography.
- 12. Visualization** **287 – 304**
- Introduction, Map types, Qualitative maps, Quantitative maps, Graduated symbol maps, Flow maps, Point symbols maps, Dot maps, Proportional symbol maps, Isoline maps, Choropleth maps, Data Classification Techniques, Standard

Deviation, Arithmetic, Geometric Intervals, Nested Means, Quantiles, Natural
Breaks, Skewed Distributions, Map Design, Elements of map design.

Appendix – I	305 – 306
Appendix – II	307 – 317
Appendix – III	318 – 322
Appendix – IV	323 – 324
Appendix – V	325 – 326
Appendix – VI	327 – 328
References	329 – 330
