Every possible effort has been made to shun the errors in this Publication. Any type of error or discrimination, if noted, may be brought to our knowledge, which will be positively corrected in our next edition. It is notified that the Publisher, Author or Book seller would not be liable for any damage or loss to any one of any kind. The reader must cross check all the facts, and contents with original Government notifications or publications.

Oceanography

Contents

- 1. Oceanography: Definition and Scope** **1–10**

Boundaries and names of the oceans, Importance of the oceans, Definition and Scope, Major Branches of Oceanography, Physical Oceanography, Chemical Oceanography, Marine Biology, Geological Oceanography, Applied Oceanography, Marine Meteorology, Oceanography and other related subjects.
- 2. A Historical Background of the Development of Oceanography** **11–29**

Classical Period – Contributions of the Greeks, The Dark Ages, The Golden Age of Discovery, Contributions of the Chinese to oceanic understanding, Contributions of Spain and Portugal, The Search to Increase the Scientific Knowledge of the Oceans, Nineteenth Century – The Golden Age of Oceanography, The U.S. Exploring Expedition, Development of Oceanography in the Twentieth Century, Satellite Oceanography.
- 3. The Morphology of the Ocean Bottom** **30–47**

The Hypsographic or Hypsometric Curve, Origin of Continental Shelf, Continental Slope, Submarine Canyons, Theories of the Origin of Submarine Canyons, The Sub-aerial Erosion Hypothesis, Diastrophic Theory, Submarine Mudflow and Landslides Hypothesis, Submarine Density Currents, Turbidity Currents Theory, Submarine Spring Sapping, Tsunamis or Earthquake Waves, The Deep Sea Fans and the Continental Rise, The Deep Sea Plains, The Oceanic Deeps.
- 4. Bottom Relief of the Oceans** **48–66**

The Atlantic Ocean : Bottom Relief, Basins, Oceanic Deeps, Islands in the Atlantic Ocean, Marginal Seas, The Pacific Ocean, Bottom Relief, Ridges and Basins, Oceanic Deeps, Islands of the Pacific Ocean, Marginal Seas, The Indian Ocean : Shape and Size, Bottom Relief, Ridges and Basins, Oceanic Deeps, Islands, Marginal Seas, The Arctic Ocean, Bottom Relief, Ridges and Basins, Islands of the Arctic Ocean, Marginal Seas, Some Minor Topographic Features in the Oceans, Seamounts, Trenches and Island Arcs.

- 5. The Physical and Chemical Characteristics of Ocean Water** **67–76**
The Chemical Structure of a Water Molecule, Water – a powerful solvent, Sea water and Fresh water, Dissolved Gases, Vertical Distribution of Dissolvable Gases, Acid-Base Equilibrium, Light in the Ocean, Why is ocean water blue? Sound in the Ocean, Sea-Water and Pure Water, Freezing and Boiling Points of Water, How water evaporates.
- 6. Temperature of the Oceans** **77–91**
Sources of Heat, Surface Temperature of the Ocean water, Factors affecting the horizontal distribution of surface temperature of the oceans, Ranges of Sea Surface Temperature, Diurnal Range of Temperature of the Ocean Water, Annual Range of Temperature, Annual Variations of Temperature in the Subsurface Layers of the Oceans, Vertical Distribution of Temperature in the Oceans, The Vertical Temperature Distribution in Adjacent Seas.
- 7. Salinity of Ocean Water** **92–109**
Salinity : Definition, Salinity – its significance, Various Sources of Oceanic Salts, Factors Causing Variations in Salinity, Annual Variation in the Surface Salinity, Distribution of Salinity, Partially or Wholly Enclosed Seas, Inland Seas and Lakes, Vertical Distribution of salinity, Regional Distribution of Salinity, Atlantic Ocean, Partially Enclosed Seas, Pacific Ocean, Indian Ocean.
- 8. Density of Ocean Water** **110–118**
Factors Controlling the Density of Ocean Water, Distribution of Density, Horizontal Distribution of Density, Vertical Distribution of Density.
- 9. Ice in the Sea** **119–125**
Importance of ice in the sea, Formation of Sea Ice, Classification and Terminology of Ice in the Sea, King's classification of ice in the Sea, Effect of Polar Ice on the Atmospheric Circulation.
- 10. Water Masses** **126–138**
Definition, T-S Diagram, The Practical Significance of the T.S. curve, Formation of water masses, Types of water masses, Surface-water masses, Deep-water masses.
- 11. Marine Deposits** **139–154**
Classification of Marine Sediments, Sources of marine Deposits, Sediment texture, Organic and Carbonic Deposits, Distribution of

Pelagic Sediment, Pacific Ocean, Atlantic Ocean, Indian Ocean, Economic benefits by the Study of Sediments.

12. Coral Reef **155–168**

Distribution of Coral reefs, Conditions of Coral growth, Types of coral reefs, Hypothesis regarding the origin of atolls and barrier reef : The subsidence theory of Darwin and Dana, Arguments in favour of this theory, Arguments against the theory of subsidence, The Non-subsidence theory of Murray, Agassiz, and Semper, Arguments against this theory, Daly's Glacial Control Theory, Arguments against Daly's theory, Application of physiography to the coral reef problem by Davis, Coral Bleaching.

13. Oceanic Waves **169–180**

Wave Characteristics, Motion of water particles in a wave, Deep-water waves, Shallow-water waves (Long waves), Transitional waves, Wind-generated waves, Wave transformation: Surf, Destructive waves, Constructive waves, Wave refraction, Wave diffraction, Wave reflection, Breaking of the waves: Breakers, Types of breakers.

14. Landforms shaped by Waves and Currents **181–200**

The Breaking Waves, Marine Erosion, Other factors of marine erosion, Tsunami, or Seismic Sea Wave, Coastal Landforms, Erosional Coastal Landforms, Depositional Coastal Landforms, Origin of Spits and Bars, Types of Coastlines, Theory of Shoreline Evolution, Shorelines of Submergence, Shoreline of Emergence.

15. Tides **201–222**

Technical Terms Connected with tides, Types of Tides, Tide-Producing forces, Combined effects of sun and moon on tides, Declinational tides, Effect of distance-Apogean and Perigean tides, Theory of Ocean tides, Equilibrium theory of tides, Merits and demerits of the Equilibrium theory, The Dynamical theory of Laplace, The Progressive Wave theory, Stationary wave theory, Tidal Currents, Importance of tidal currents, Tidal Bore, Storm Surges, Tides in bays and gulfs, North Sea tide, The Bay of Fundy, Tides in Partly enclosed seas, Effects of tides.

16. General Character and Origin of Ocean Currents **223–234**

Ocean Currents and Climate, Surface Ocean Currents and Fishing Grounds, Types of Ocean Currents, The Theories of Ocean Currents, Causes and Character of Ocean Currents, Ekman Spiral, Geostrophic Currents, Westward Intensification, Density of ocean water, Coriolis force, Gravitational force, Atmospheric Pressure,

Precipitation and evaporation, Difference in temperature, Melt Water, Modifying Factors.

17. Currents of the Pacific and Indian Oceans 235–247

Mid-Pacific Currents, South Equatorial Current, Equatorial Counter Current, Currents of the North Pacific Ocean, Currents of the South Pacific Ocean, El Nino, La Nina, Currents of the Indian Ocean, Currents of the North Indian Ocean, The Winter Monsoon Drift, The South-west Monsoon Drift and the Somali Current, Currents of the South Indian Ocean, The South Equatorial Current.

18. Currents of the Atlantic Ocean 248–260

Currents of the North Atlantic Ocean, Gulf Stream, The North Atlantic Drift, The Canaries Current, The Labrador Current, Sargasso Sea, Currents of the South Atlantic Ocean, Falkland Current, The Currents of the Antarctic Ocean, The Antarctic Circumpolar Current, Thermohaline Circulation, The Great Conveyor Belt.

19. Man and Marine Resources 261–281

Meaning of Resource, The Oceans and the Climate, Marine Energy Resource, Ocean Thermal Energy Conversion (OTEC), Biological Resources, Marine Food Resource, The Fishing Industry, Distribution of Marine Life, Life in the littoral zone, Life in the Pelagic Zone, Life in the intermediate Depths, Life on the Ocean Bottom (Abyssal Zone), Mariculture, Aquaculture, Whaling, Drugs, Oceans—The Treasure House of Minerals, Natural Gas, Where do oil and gas form? Gas-Hydrates, Manganese Nodules, Phosphorite, Placer Deposits, Sand and Gravel, Marine Pollution, Oil Spills, Oceans as modifier of Greenhouse effect, Non-extractive Resources, Marine Resources and the Law of the Sea, The International Law of the Sea, Cataloguing Ocean Resources.

20. Global Warming 282–287

Industrial Sources of Greenhouse Gases, Carbon Dioxide and Global Warming, Methane and Global Warming, Chlorofluorocarbons (CFCs) and Global Warming, Other Greenhouse gases and Global Warming, The Potential effects of Global Warming, Predicting Climate Change, Conclusion.

Multiple-Choice Type Questions and their Answers 288–294

Suggested Readings 295–296

List of Maps and Diagrams

- Fig. 2.1A. Prince Henry of Portugal.
- Fig. 2.1B. Model of a sixteenth century ship.
- Fig. 2.2A. Ferdinand Magellan, Portuguese explorer. His expedition was the first to circumnavigate the world.
- Fig. 2.2B. Magellan's two voyages of circumnavigation.
- Fig. 2.3. Captain James Cook. He twice circled the globe. Penetrated into the Antarctic. Charted coastlines from Newfoundland to New Zealand.
- Fig. 2.4. Lieutenant Charles Wilkes, Commander of the U.S.A.'s naval expedition, aboard the flagship Vincennes.
- Fig. 2.5. Mathew Fontaine Maury. Compiler of winds and currents. Wrote 'The Physical Geography of the sea.
- Fig. 2.6. Charles Darwin's Voyage on the Beagle.
- Fig. 2.7. Fridtjof Nansen. Norwegian Oceanographer and polar-explorer.
- Fig. 2.8. The joint U.S.-French Topex/Poseidon satellite orbits 1,336 km. above earth covering 95% of the ice-free ocean every ten days.
- Fig. 3.1. Hypsographic Curve.
- Fig. 3.2. Ridges and trenches : Oceans of the world.
- Fig. 4.1. Bottom Relief of the Atlantic Ocean.
- Fig. 4.2. Continental Shelf : West European coast, N.E. Coast of U.S.A.
- Fig. 4.3. Atlantic Ocean : Ridges and Trenches.
- Fig. 4.4. Bottom Relief of the Pacific Ocean.
- Fig. 4.5. Pacific Ocean : Ridges and Trenches.
- Fig. 4.6. Bottom Relief of the Indian Ocean.
- Fig. 4.7. Indian Ocean : Ridges.
- Fig. 5.1. The figure shows how concentrations of oxygen and carbon dioxide vary with depth. Oxygen concentration decreases below the sunlit layer, whereas surface levels of CO₂ concentration are low. Again CO₂ concentration increases below the sunlit layer and also with depth.
- Fig. 5.2. The relationship between water depth and sound velocity.
- Fig. 6.1. Annual average surface temperature : January.
- Fig. 6.2. Annual average surface temperature : July.
- Fig. 6.3. Latitudinal Variation in the Ocean surface temperature.
- Fig. 7.1. Surface Salinity of the Oceans.
- Fig. 8.1. Mean meridional density distribution.
- Fig. 8.2. Salinity, Freezing Point and Temperature of Maximum Density.
- Fig. 9.1. Sea Ice distribution in the Arctic and Antarctic.
- Fig. 9.2. North Atlantic Currents and Ice bergs.
- Fig. 10.1. T.S. Diagram.
- Fig. 10.2. Surface Water Masses in the Ocean.

- Fig. 10.3. Temperature-salinity relations of water masses in the North and South Pacific Ocean.
- Fig. 10.4. Temperature-salinity relations of water masses in the Atlantic and Indian Ocean.
- Fig. 11.1. General distribution of marine deposits on the ocean floor.
- Fig. 11.2. Marine deposits on the bottom of the Pacific Ocean.
- Fig. 11.3. Marine deposits on the bottom of the Atlantic Ocean.
- Fig. 11.4. The distribution of marine deposits in the Indian Ocean.
- Fig. 12.1. Fringing Reef.
- Fig. 12.2. The Great Barrier Reef.
- Fig. 12.3. Barrier Reef.
- Fig. 12.4. Barrier Reef and its passages.
- Fig. 12.5. Atoll.
- Fig. 12.6. An idealized cross-section of an Atoll.
- Fig. 12.7. Coral Reef formation : Darwin and Dana.
- Fig. 12.8. The four stages depicting the gradual change of a fringing reef attached to a volcanic island into an atoll.
- Fig. 12.9. Different stages of the coral reef development on a subsiding island; Subsidence Theory.
- Fig. 12.10. Non-subsidence theory of Coral Reef formation : Murray.
- Fig. 12.11. Glacial Control Theory : Daly.
- Fig. 12.12. Davis : Rising Sea Level and the change of a fringing reef attached to a stable island into a barrier reef and atoll.
- Fig. 12.13. Subsidence : Different stages of the development of a barrier reef.
- Fig. 13.1. Types of waves.
- Fig. 13.2. Wave-length, crest and wave height.
- Fig. 14.1. Foreshore and Backshore lines.
- Fig. 14.2. A curling breaker.
- Fig. 14.3. Swash and backwash.
- Fig. 14.4. Shallow water waves and their changing form.
- Fig. 14.5A. Wave refraction.
- Fig. 14.5B. Wave diffraction.
- Fig. 14.6A. Direction of the dip and steepness of a cliff.
- Fig. 14.6B. Cliff.
- Fig. 14.7A. Four stages in the development of a shore profile.
- Fig. 14.7B. Wave-cut platform and wave-built terrace.
- Fig. 14.8. Stack, arch, cave and blow-holes.
- Fig. 14.9A. Stack.
- Fig. 14.9B. Stack.
- Fig. 14.10. Arch.
- Fig. 14.11. Beach.

- Fig. 14.12 : Spit and off-shore bar.
- Fig. 14.13 : Hook and compound hook.
- Fig. 14.14 : Connecting bar and associated features.
- Fig. 14.15 : Tombolo.
- Fig. 14.16 : Loop and loop bar.
- Fig. 14.17 : Cycle of erosion–Shoreline of emergence :
 General conditions, Initial stage. Youthful stage.
 Mature stage. Old stage.
- Fig. 14.18 : Cycle of erosion – Shoreline of submergence
 Primary stage, Youthful stage, Mature stage, Old stage
- Fig. 14.19 : Coasts and shore line.
 Ria coast, Fiord coast, Plain coast, Delta coast,
 Alluvial coast, Volcanic coast, Faulted coast,
 Coast line with offshore bar, Mixed shore line.
- Fig.15.1. Common centre of gravity of the revolution of the earth and moon.
- Fig. 15.2. Tide generating force.
- Fig. 15.3. Direct and indirect tides.
- Fig. 15.4. Diurnal change in the time of high tide.
- Fig. 15.5. Spring Tide.
- Fig. 15.6. Neap Tide.
- Fig. 15.7. Moon in apogee and perigee.
- Fig. 15.8. Distribution of tidal forces.
- Fig. 15.9. Co-tidal lines in the Atlantic Ocean.
- Fig. 15.10. Harris : Unimodal oscillation.
- Fig. 15.11. Harris : Bimodal oscillation.
- Fig. 15.12. Amphidromic point in the North Atlantic Ocean.
- Fig. 15.13. Tidal Bore.
- Fig. 16.1. Ekman Spiral and Net water Movement.
- Fig. 17.1. The Kuroshio System.
- Fig. 17.2. Ocean currents : Pacific Ocean.
- Fig. 17.3. Currents of the Indian Ocean (Winter Monsoon).
- Fig. 17.4. Currents of the Indian Ocean (Summer Monsoon).
- Fig. 18.1. Currents of the Atlantic Ocean.
- Fig. 18.2. The Thermohaline Circulation.
- Fig. 20.1. Origin of excessive carbon dioxide.
 Countries and regions of origin (a) for excessive CO₂ in 1994 and
 (b) forecast for 2025 A.D.
- Fig. 20.2. Global temperature trends.
